Handwritten signature or initials in the bottom right corner.

The General Organization for Housing, Building and Planning Research of the Arab Republic of Egypt is pleased to present to UNESCO and school authorities in the Arab world this study which deals with the thermal and acoustical requirements of school buildings.

This study has been prepared by:

Dr. Eng. Hamed Fahmy
Dr. George Bassily Hanna
Dr. Eng. Adel El-Malawany

and supervised by:

Dr. Mostafa El-Hifnawi

The study was carried out in accordance with a contract concluded between the UNESCO and the Organization, for one year effective December 1, 1976.

We would like to thank all those who kindly assisted in the preparation of this study, which we hope that it will help solve similar architectural and school planning problems and, at the same time, serve as a basis for further research on the adaptations of building to environmental conditions.

SINCE 1958

Dr. Mostafa El-Hifnawi

INTRODUCTION	1
A. ARCHITECTURAL PART	4
A.1. Study of different groupings of teaching spaces	
1.1. History	4
1.2. Systems of grouping the teaching spaces	6
A.2. Study of teaching spaces for different capacities concerning forms and functional areas	8
A.3. Study of sun protection for teaching spaces	
3.1. General	14
3.2. The region of the Arab Republic of Egypt	15
3.3. The choice of school ground	18
3.4. The orientation of school building	18
3.5. Natural Lighting	18
3.6. Natural ventilation	19
3.7. Sun shading	20
A.4. Study of Sunshading	21
4.1. General	21
4.2. The solar chart	21
4.3. School day and shadowed period	23
4.4. The use of sunpath diagrams	23
4.5. Practical application	24
B. THERMAL BEHAVIOUR OF TEACHING SPACES OF SCHOOL BUILDINGS	41
B.1. Introduction	41
B.2. Thermal response of a classroom	42
B.3. Climatic data for the design of thermal environments	43
3.1. External climate	43

	Page
3.2.1 Solar intensities	44
3.3. Sol-air temperature	45
B.4. The BRE admittance procedure for calculating indoor temperature	47
4.1. Environmental temperature	47
4.2. U-value and external surface resistance	48
4.3. Admittance of a room	49
4.4. Types of gain	53
4.4.1. Casual gains	53
4.4.2. Heat flow through transparent surfaces	54
4.4.3. Heat flow through opaque surfaces	55
4.4.4. Losses due to Ventilation	56
4.4.5. Rise in Mean indoor temperature	57
4.4.6. Swings of indoor of environmental temperature	58
B.5. Main structural details	59
5.1. Class 1	59
5.2. Class 11	59
B.6. Result and discussion	60
6.1. Effect of ventilation	
6.2. Effect of shaded and unshaded external facade	66
6.3. Effect of orientation	70
6.4. Comparison between single and double loaded systems	70
B.7. Conclusion	72

C. ESTIMATION OF THE ACOUSTICAL REQUIREMENTS FOR SCHOOL BUILDINGS	94
Introduction	94
C.1. Site of the school building	95
1.1. Minimum distance between railway and school building	95
1.2. Minimum distance between road and school building	96
1.3. Minimum distance between school and other buildings	98
C.2. Acoustical performance of classroom	101
2.1. Dimension and reverberation time of classroom	101
2.2. Optimum reverberation time	101
2.3. Percentage syllable articulation	103
C.3. Sound insulation	106
3.1. Sound insulation of partitions	106
3.2. Sound insulation of windows	112
C.4. Sound transmission in schools	112
C.5. Discussion and results	123
